### FOREWORD

The North Carolina Crop Improvement Association (NCCIA) is a non-profit educational and service organization recognized as the official agency for seed certification in North Carolina. Certification is a system of records, inspections, and standards. NCCIA is managed by a board of eleven directors elected from its membership. NCCIA is a member of the Association of Official Seed Certifying Agencies (AOSCA).

The purpose and objectives of the Association are:

1. To encourage the production of excellent quality seed grown and distributed under controlled conditions to ensure genetic identity and purity.
2. To encourage the more widespread use of superior seeds by such means as may be designated by its members or Board of Directors.
3. To certify only varieties accepted by NCCIA.

### NOTICE TO BUYERS

All inquiries and purchases of certified seed should be made directly from the growers listed in this directory. It is the grower's responsibility to supply seed representative of the seed submitted and approved for certification by North Carolina Crop Improvement Association. It is recommended that the buyer examine the seed and the analysis tag before all seed is purchased. All Seed Sold As Certified Seed **MUST** Have An Official Certified Tag Attached **OR** It Is **NOT** Certified.

The North Carolina Crop Improvement Association can assume no financial responsibility for seed listed in this directory or for disagreements over sales that may arise from the list. However, any seed purchased or delivered not meeting certification standards should be brought to the attention of the Director of the Association. Certification standards pertain only to trueness-to-type, diseases and weeds. NCCIA does not warrant the final condition of the seed.

### SEED PASSING FIELD INSPECTION

All lots of seed listed herein have passed field inspection. Final certification of these seed depends upon the purity and germination tests. Orders may be booked subject to certification.

**PROSPECTIVE PRODUCERS OF CERTIFIED SEED**

Farmers interested in starting production of certified seed should write the North Carolina Crop Improvement Association office for a copy of certification regulations and suggestions as to the best source of seed and methods of handling the crop. NOT ALL CERTIFIED SEED IS ELIGIBLE FOR RECERTIFICATION.

## SMALL GRAIN CERTIFICATION STANDARDS (In Part)

### Sources of Seed

Fields to be eligible for inspection for certification must be planted with either **Foundation Seed or Registered Seed**.

### Field Standards

The field must be isolated by a definite division or distance of at least ten (10) feet and meet the following requirements:

	Foundation	Registered	Certified
Other varieties and off-types (maximum)	0.02%	0.05%	0.1%
Other crops (maximum)	None	---- <sup>1</sup>	---- <sup>1</sup>
Weeds (maximum)	---- <sup>2</sup>	---- <sup>1</sup>	---- <sup>1</sup>
Loose smut and covered smut <sup>3</sup>			
Oat, Triticale, Wheat	----	0.05%	0.25%
Barley	----	0.02%	0.1%

<sup>1</sup> Reject if severe

<sup>2</sup> No noxious weeds, darnel, chess, or cheat

<sup>3</sup> Require a recommended seed treatment for certification if the field exceeds the standard

### Seed standards

A sample must be tested and the lot of seed meet the following standards:

Factor	Foundation	Registered	Cert.-1	Cert.-2
Pure seed (minimum)				
Barley, Oat, Triticale, Wheat	98%	98%	98%	97%
Rye	97%	97%	97%	96%
Inert matter (maximum)				
Barley, Oat, Triticale, Wheat	2%	2%	2%	3%
Rye	3%	3%	3%	4%
Weed seed (maximum)	0.01%	0.02%	0.05%	0.1%
Restricted noxious weeds <sup>1</sup>	None	None	None <sup>2</sup>	5/lb <sup>3</sup>
(maximum)				
Other crop seed (maximum)				
Other kinds	None	1/lb <sup>4</sup>	5/lb <sup>5</sup>	10/lb <sup>6</sup>
Other varieties and off-types	0.02%	0.05%	0.1%	0.1%
Germination (minimum)				
Barley, oats, triticale, wheat	----	85%	85%	75%
Rye	----	80%	80%	70%
Barley loose smut <sup>7</sup>	----	0.05%	----	----

<sup>1</sup> Includes all noxious weeds, darnel, chess, and cheat.

<sup>2</sup> Permit one viable wild onion or wild garlic bulblet per pound

<sup>3</sup> Blessed thistle, cocklebur, sandbur, sicklepod, spurred anoda, velvetleaf, wild onion, and wild garlic are limited to four (4) seed per pound.

<sup>4</sup> Limited to other small grain

<sup>5</sup> Limited to other small grain, except three rye in other small grain, one vetch, five sorghum, or five soybean seed per pound

<sup>6</sup> Rye in other small grain and vetch limited to five seed of each per pound

<sup>7</sup> Loose smut to be determined by embryo test. If field or seed standards are exceeded, a recommended seed treatment must be used for certification.

These brief descriptions are based on information provided by the owner of the variety at the time of release and are believed to be accurate. However, certain traits, such as disease reactions, may change as new races of pathogens become prevalent.

## BARLEY

**BOONE** was released by the North Carolina Agricultural Research Service. It is a short awned variety with early maturity and excellent yield potential. Unlike some awned types, this variety has brittle awns and threshes very easily. Boone has medium test weight, and fair straw strength. It has good leaf rust resistance and poor mildew resistance, but has produced good yields even where mildew was a major factor. Boone is susceptible to loose smut.

Stanly	DOGWOOD FARMS (Dwight Lowder) 25318 Austin Road, Albemarle 28001	704-982-8148 704-982-8149	C	49

**NOMINI** is an early maturing, medium tall, high yielding six-row winter barley with compact spikes released by the Virginia Agricultural Experiment Station. It is resistant to powdery mildew, Septoria, and barley yellow dwarf virus. Nomini is moderately susceptible to leaf rust and is not very winter hardy. **US PROTECTED VARIETY and can be sold only as a Class of Certified Seed – 1994 PVPA.**

**PRICE** is a medium maturity, short awned, six row winter barley released by Virginia Polytechnic Institute and State University and Virginia Agricultural Experiment Station. Flag leaf is upright. Maturity is three days later and average plant height (34 inches) is two inches taller than Callao. Straw strength and test weight are rated very good. It is resistant to powdery mildew and barley yellow dwarf. It is moderately resistant to leaf rust. **US PROTECTED VARIETY and can be sold only as a Class of Certified Seed – 1994 PVPA.**

## OATS

**BROOKS** is a medium early variety released by the North Carolina Agricultural Research Service. It has medium height, excellent yield, and fair lodging resistance. It has good winter hardiness. Brooks has tolerance to barley yellow dwarf virus and good resistance to soil-borne mosaic. It has poor resistance to Crown rust. This variety offers a new level of overall protein production; data indicates at least 25% advantage in pounds of protein per acre over most other varieties. Good smut resistance.

**CABALLO** is a hulless winter oat variety released by North Carolina Agricultural Research Service. It has high test weight. It is susceptible to crown rust. Caballo is three days earlier than Brooks and shorter than most other oat varieties. Depending upon the growing environment, threshed seed lots of Caballo may contain over 50% hulled grains. **US PROTECTED VARIETY – can only be sold as a class of Certified Seed – 1994 PVPA.**

**SOUTHERN STATES 76-30** is a medium late winter oat variety released by Southern States Cooperative. It is medium tall and is similar to Coker 716 in several plant characteristics and in reaction to several diseases. The variety is susceptible to Crown and stem rust, but is resistant to soil-borne mosaic and culm rot. It is generally adapted to the Piedmont and Coastal Plain.

**SS 76-40** is a late maturity oat variety exclusively marketed by Southern States Cooperative, Inc. and was released in 2005. Plant height is shorter than 'Brooks'. Flag leaf droops at boot growth stage. Lodging is less than Brooks or Rodgers. SS 76-40 has superior test weight and more tolerance to freezing temperatures when compared to Brooks. SS 76-40 has greater resistance to barley yellow dwarf virus in comparison with Brooks. **No Registered class. US PROTECTED VARIETY – 1994 PVPA.**

## WHEAT

**25R32** is a soft red winter wheat with a prostrate juvenile growth habit with recurved, twisted flag leaf. It averages 132 days to heading. It has yellow anthers. It has a tapering, nodding spike that is awned. It averages 37 inches in height. It has resistance to Fusarium head blight, stripe rust, and powdery mildew. It has average resistance to leaf rust and leaf blights. It has resistance to Hessian fly, H9 and H10 genes. **US PROTECTED VARIETY — 1994 PVPA.**

COUNTY	PRODUCER	TELEPHONE & FAX #	GEN	ACRES

**APPALCHIAN WHITE** is a hard white winter wheat developed by USDA .It is awned, semi-dwarf, with white chaff. It heads on the average 115 days after January 1. It has good stalk strength, good winter hardiness. It averages 35 inches in height. It has moderate resistance to yellow dwarf virus, powdery mildew, Fusarium head blight, stagonospora nodorum head blight, and leaf rust. It has good Hessian fly resistance but is resistant to stripe rust. It has moderate susceptibility to stem rust. **US PROTECTED VARIETY and can be sold only as a class of Certified Seed – 1994 PVPA.**

## QUALITY ASSURANCE

The Quality Assurance Program (QA<sup>®</sup>) is a third-party field inspection program that ensures varietal purity and other requested varietal characteristics. Services offered with this program include recordkeeping, field inspection, seed sampling, lab inspection, and labeling. Seed producers customize the program to meet their individual needs by deciding to participate in some or all of these services. Some producers use only the field inspection service, while others utilize the entire system labeling their seed with the Quality Assurance tag or logo. For more information regarding specific products produced using the QA<sup>®</sup> Program, please contact the participating company. The following small grain varieties were field inspected:

### WHEAT

**USG 3120** is a medium-early maturity soft red winter wheat released by UniSouth Genetics. It is an awned, medium tall plant with very good resistance to leaf blotch, stripe rust, leaf rust, and powdery mildew. It also has good resistances to soil-borne mosaic virus. It has excellent winter hardiness and standability. This variety has a wide area of adaptability with strong test weights per bushel. **US Plant Patent**
